All dental professionals of different specialties are living in hazardous risky environment. This risky environment should be changed by developing the facilities which reducing that risky factors.

The risky environment which are facing the Dental professionals are:

1. Biological
2. Psychological
3. Radiological
4. Postural complications
5. Chemical
6. Sound
7. Pressure vessels and others

Because of the above mentioned risky factors, most of Dental professionals forcing them to have an early retirement, and some of them to suicide due to increase of the surrounding stress. Changing the dentistry environment will helping to reduce the risk complications
